

LEIGHTRONIX

Automation Solutions

LEIGHTRONIX, INC. **PARTNER**

Combine the power and flexibility of the TCD/V3™ Television Automation System Controller with the video performance of the Image Server 2000 to create an unbeatable digital video automation system.

The right combination for a wide range of applications

Affordable ♦ Versatile ♦ Reliable
Cable and Broadcast Solutions

LEIGHTRONIX, INC.
Video Servers • Television Automation

The TCD/V3™ Television Automation System Controller is your best choice for affordable, versatile, and reliable station automation.

Expansion

Control up to 16 channels of digital video playback while managing multiple Image Server units, all under the control of just one TCD/V3 system controller.

System Control

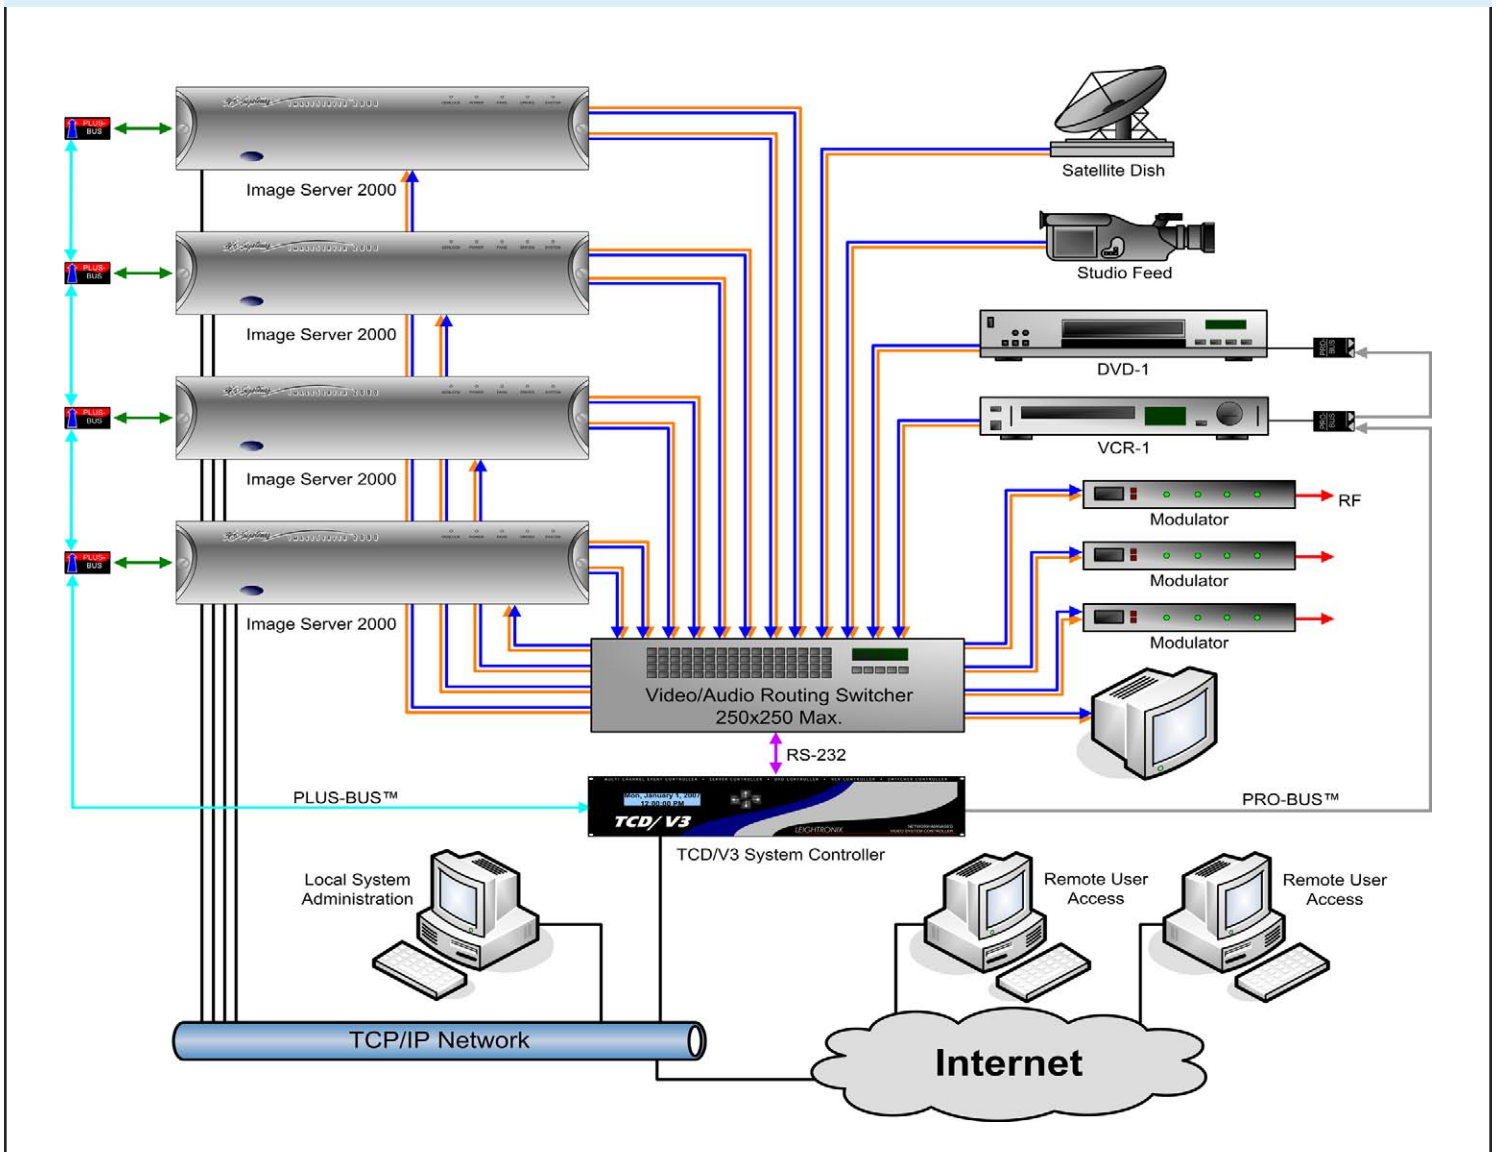

Build a comprehensive system and add in playback and recording devices as needed. The TCD/V3 also provides control for DVD players and VCRs.

Signal Routing

No system is complete without signal routing! The TCD/V3 supports routing switcher equipment from a variety of popular manufacturers.

Remote Network Access

Both the TCD/V3 and Image Server 2000 are equipped with network ports, ready and accessible where and when you need access, across the office or across the country.
