## LEIGHTRONIX INTERFACES WITH DVD/VCR COMBINATION DECKS

*PRO-BUS Device Control Interfaces Expand Support for JVC® DVD/VCR Players/Recorders*

Holt, MI. — April 30, 2007 — LEIGHTRONIX announces that it has recently interfaced four JVC DVD/VCR combination decks to offer video professionals automated and remote network control for DVD and videotape playback and recording. The combination decks are from the JVC Professional Product line and include models SR-MV45, SR-MV55, SR-DVM600, and SR-DVM700.

The interface to the JVC DVD/VCR combination decks further expands the already comprehensive listing of supported DVD and VCR models for the LEIGHTRONIX line of television automation and video server systems. LEIGHTRONIX offers a wide range of powerful and affordable playback solutions for DVD based television operations starting as low as \$995. Those with systems based primarily on server playback can also benefit from the DVD/VCR interface capabilities with the flexibility of DVD playback, unattended recording to DVD, and automated ingest to server.

The DVD/VCR combination decks are supported through the PRO-BUS™, a proprietary device control bus exclusive to LEIGHTRONIX system controllers. The PRJVDVD interface is an infrared (adhesive, front panel) remote transmitter type. The PRJVSRM is a wired interface equipped with a mini-plug for connection to the External Wired Remote Terminal on the rear of the JVC DVD/VCR combination decks. The PRJVDVD and PRJVSRM interfaces support DVD playback/recording and/or videotape playback/recording through standard PRO-BUS commands (PLAY, REWIND, RECORD, and STOP).

Visit [www.leightronix.com/support/dvd\\_compatibility.htm](http://www.leightronix.com/support/dvd_compatibility.htm) for more information on control solutions for DVD players and recorders.
