ADVANCED SCHEDULING FEATURES ADDED TO LEIGHTRONIX NEXUS

Holt, MI. — May 9, 2006 — The LEIGHTRONIX NEXUS™ has received yet another boost to the already powerful and easy-to-use scheduler with two new features that minimize work and maximize scheduling ease.

The media library now allows users to schedule multiple digital media resources with a single motion. Just add supported digital media resources, including video slides (JPEG), video slide shows, MPEG video clips, and looping MPEG clips, to individual playlist resources. From there, conveniently drag and drop playlists into the scheduler to simultaneously add listed blocks of information and programming to broadcast schedules.

Another big time saver is the new *"apply to all gaps"* feature, which allows users to quickly fill the unscheduled time between programs with digital media resources. After scheduling the primary programs, any digital media resource from the library can be entered into the schedule and added to all remaining gaps on the selected channel. The gap fill feature allows quick and easy placement of a common default message and ensures complete filling of all programming gaps within a schedule.

The NEXUS is a specialized television automation solution offering fully integrated digital video playback and recording, advanced video messaging, machine control, video/audio switching, and scheduling in one compact and affordable package. The NEXUS offers unmatched value, combining the latest digital automation features with support for legacy playback equipment at a price within reach of nearly every local television operation.

About LEIGHTRONIX, INC.

The LEIGHTRONIX line of control products has been widely used in commercial video applications for more than 20 years, providing playback automation, on-demand video, interactive media delivery, and remote equipment control. Clients include a wide range of corporate/industry, medical, educational, and government/military installations as well as local cable and broadcast television operations. In addition to the standard product line, LEIGHTRONIX also develops custom system control solutions. For more information, please visit www.leightronix.com.
