## **LEIGHTRONIX Introduces Remote Video Capture and Multi-Camera Control System**

*Robotic Camera System Allows a Single Operator to Produce Professional Video Programming*

Holt, MI — August 16, 2011 — LEIGHTRONIX introduces a remote video capture and multi-camera control solution that allows a single operator to easily record an event, such as a public meeting, fine arts concert, or local sporting event, from multiple vantage points with professional, broadcast quality results.

The system is built upon high-performance, low cost video technologies, including robotic pan/tilt/zoom digital video cameras, a four channel live production switcher, and the LEIGHTRONIX PEGvault-SD™, a real time digital video encoder. The video cameras and production switcher are easily integrated with the PEGvault-SD, which provides control for the cameras and switcher via a Web-based user interface.

The system was designed especially for government agencies of all sizes, educators, and any other organization seeking a compact, all-in-one system for event capture. The highly versatile solution makes integration with LEIGHTRONIX broadcast and streaming products and services easy, allowing for remote Next to Live™ broadcasts, live Webcasts, and automatic transfers of digital media files to LEIGHTRONIX NEXUS® series video servers for rebroadcast or to a PEG Central® Web media hosting and streaming video-on-demand account.

The system's affordable price tag and ease of use make it an ideal solution for multiple communities and organizations who share a local cable or online Web channel. Any number of remote systems can be deployed throughout a localized region, with each system capturing meetings and events and forwarding digital content to a common broadcast center or online video library.

Each system is configured and operated using a common Web browser. At the start of each event, operators simply click on the record button and then use the quick key preset assignments to focus attention on pre-determined subjects throughout a meeting or event. Camera views are automatically readied, allowing the operator to "take" the next shot while the PEGvault-SD automatically controls the live switcher for ultra smooth transitions and steady shots that result in a polished final production. Operators can also incorporate audio/video resources by selecting the presentation input on the switcher, allowing viewers at home to see meeting presentation graphics and text with flawless clarity.
