Software Release Provides NEXUS Series Users with Exciting New Features

New features include a confidence monitor, instant video preview, and video clip editor

Holt, MI — September 10, 2014 — LEIGHTRONIX has released a free software update for its NEXUS® series servers, giving users added functionality. Adding new features and updating existing features based on customer feedback, LEIGHTRONIX is pleased to release the latest version of the WinLGX™ scheduling software at no cost to NEXUS series users.

Confidence Monitor—The latest version of the WinLGX scheduling software comes with a new confidence monitor feature. The confidence monitor allows users to ensure the quality of MPEG files as they are being recorded by their NEXUS series servers' broadcast MPEG recorders. Once the broadcast MPEG recorder begins to capture an event, the recorded video will display on the confidence monitor after a user-specified delay of 5 to 90 seconds while the server continues to carry out the recording. With this new capability, users can check the video quality of the event being captured and ensure there are no issues with the recorded content.

Instant Video Preview—MPEG files on NEXUS series USB and NAS storage devices and users' local storage areas can now be displayed in the new WinLGX instant video preview monitor window. The preview monitor can be conveniently accessed when selecting MPEG files for scheduled or immediate playback, as well as when using the WinLGX storage manager and library resource view windows. Controls on the preview monitor window provide the ability to scrub or jump to different sections of the video, allowing users to quickly check video content.

Video Clip Editor—Once video content has been added to a NEXUS series video server, users are able to both preview and trim the video within the new WinLGX video clip editor. The preview monitor included on the video clip editor window allows users to perform a non-destructive trim of video content without using an external monitor or interrupting the playback of NEXUS series MPEG players. Users can also scrub through content in the preview monitor, allowing them to quickly find and set in and out points within the video.

The new software update is completely free and can be accessed by users registered on the LEIGHTRONIX Support Center website. For more information about these updates or information on any of our other products, contact a LEIGHTRONIX solutions specialist at sales@leightronix.com or by calling (800) 243-5589.

About LEIGHTRONIX, INC.

LEIGHTRONIX is recognized as an industry leader in specialty video equipment design and manufacturing, including digital video solutions that include servers, encoders, and decoders, television automation, live and video-on-demand streaming media, IPTV, and remote equipment control. A model of stability and longevity in the quickly evolving professional video market, LEIGHTRONIX continues to set standards in product value and versatility that exceed customer expectations in both product performance and support.
