

LABvault-SD

Digital Player/Recorder

Digital Video & Audio Capture, Archive, Share

The LEIGHTRONIX LABvault-SD™ is a specialized digital video recorder/player designed for a laboratory or classroom environment, allowing users to easily capture and digitize an incoming video/audio signal from a live process or event.

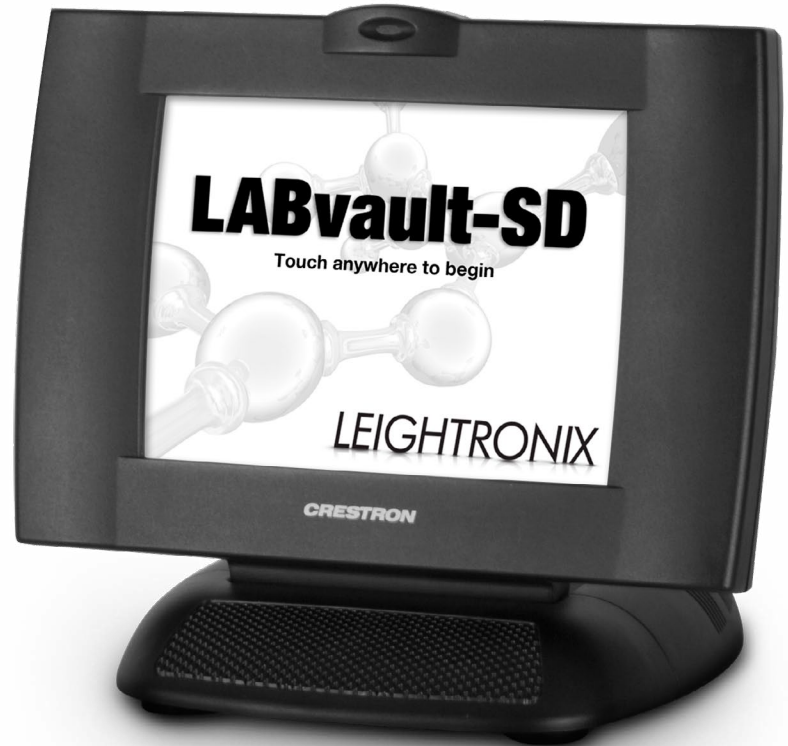

The LABvault-SD makes capturing an event foolproof, with push button recording and preset record parameters. You can actually flatten the learning curve for operating digital video equipment. With the LABvault-SD, you get a complete and fail safe recording the first time!

Files recorded by the LABvault-SD may be quickly transferred to your digital archive or a LEIGHTRONIX server for scheduled broadcasting on a private or local video channel or streaming to a worldwide audience.

LABvault-SD lets you digitaly capture and share with sight and sound!

Versatile Applications Include:

- Interviews
- Laboratory Procedures
- Classroom Projects
- Live Events

END-TO-END Solutions for
Broadcast & Streaming

LEIGHTRONIX

CAPTURE TRANSFER SHARE - Super easy!

SETUP

Video and audio may be sourced from a video production system or a camera and microphone connected to the LABvault-SD video (BNC) and audio (dual RCA) connections.

RECORDING

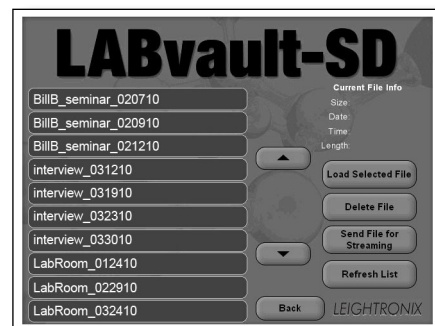

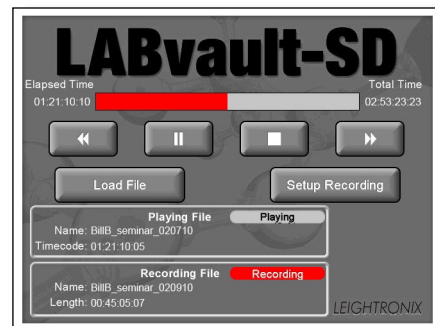

Recording is made simple with an interactive, touch screen interface. Just select "Setup Recording," enter a filename, and press the record option. The touch screen interface clearly indicates the duration and status of your recording.

PLAYBACK

Now that your recording is done, you can immediately review the new digital media file recording on a television monitor connected to your LABvault-SD. Use the touch screen playback controls (PLAY, PLAY SHUTTLE FWD/REW) to display your new recording.

MEDIA TRANSFER

With the final push of a button, the user may accept the video recording and initiate immediate transfer of the file to your local network, the Internet, or a coordinating LEIGHTRONIX digital video server. Supported LEIGHTRONIX broadcast, streaming, or archive servers allow your videos to be scheduled or broadcast or made available on the Web as streaming video-on-demand.

FEATURES

- Zero Learning Curve - Anyone can Capture Digital Video!
