

MINI-T-NX

Video Server/System Controller

THE LOW-COST Digital Automation Solution

Low-cost digital playback solutions have never offered as much in functionality or performance as the MINI-T-NX. In one compact box, the MINI-T-NX provides everything you need to bring digital video to your television operation, including an MPEG-2 video/audio server, dynamic video messaging, DVD/VCR control, and video/audio switching. Now even those with limited equipment budgets can go digital with the MINI-T-NX.

Affordable ♦ Versatile ♦ Reliable
Cable and Broadcast Solutions

LEIGHTRONIX, INC.
Video Servers • Television Automation

Easy

- Drag and Drop Scheduling
- Error Checking with Conflict Reporting

Digital

- All-Digital MPEG Video Playback
- Integrated Hardware MPEG Record (Encoder) Channel
- Internal Storage Holds Hundreds of Clips, Promos, and Full Length Video Programs

Remote Access

- Integrated TCP/IP Network Port
- Transfer Media Files from Remote Locations via LAN, WAN, or the Internet

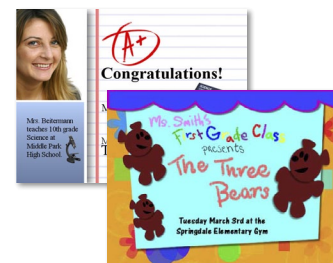

Digital Video Server

Until now, digital video at such a low price was unheard of when considering a “total” playback solution. With an internal video server, the MINI-T-NX plays industry standard MPEG-2 video/audio files and allows you to realize the benefits of digital video playback.

Digital Video Messaging

Need video messaging? No need to look any further. Simply upload your JPEG video slides to the MINI-T-NX and synchronize your messages with program playback.

Device Control and Switching

DVD, videotape, and other pass-through resources such as satellite or studio feeds still play an important role in any playback system and the MINI-T-NX provides the necessary control and switching to handle the whole job. The internal video/audio switcher allows selection of external video/audio resources manually or through pre-programmed events. The MINI-T-NX includes two internal, infrared control interfaces (with IR transmitters) right out of the box. The IR control ports are user-programmable for operation with select DVD players and VCRs. PRO-BUS™ interfaces allow control of additional DVD players or VCRs (interfaces sold separately).
