

# PEGvault-SD

Digital Video Encoder

**HIGH-PERFORMANCE**  
**SIMPLIFIED OPERATION**  
**AUTOMATIC FILE TRANSFERS**

Designed for high-performance encoding and ease of use, the PEGvault-SD™ will streamline your digital workflow with simplified operation and automatic digital media file transfers. The PEGvault captures video/audio from a live feed, VCR, or any other video source you want to record and produces high-quality digital media files for playback on broadcast, cable, and streaming video-on-demand systems.

## HIGH-PERFORMANCE ENCODING

Hardware-based, digital video encoding means you get top-quality results. The PEGvault is equipped with the superior MPEG encoding technology used in the LEIGHTRONIX NEXUS® and UltraNEXUS™ video servers. Concerned about long meetings or events? The PEGvault's high-performance encoder lets you record continuously for up to 24 hours in one program file.

## SIMPLIFIED OPERATION

Using the Web interface, set up the PEGvault for push button recording. Just select a record quality preset, enter network settings for the automatic file transfer destination, and designate a file name default. The PEGvault is now ready for fast and easy RECORD-STOP operation through the wireless, infrared remote control.

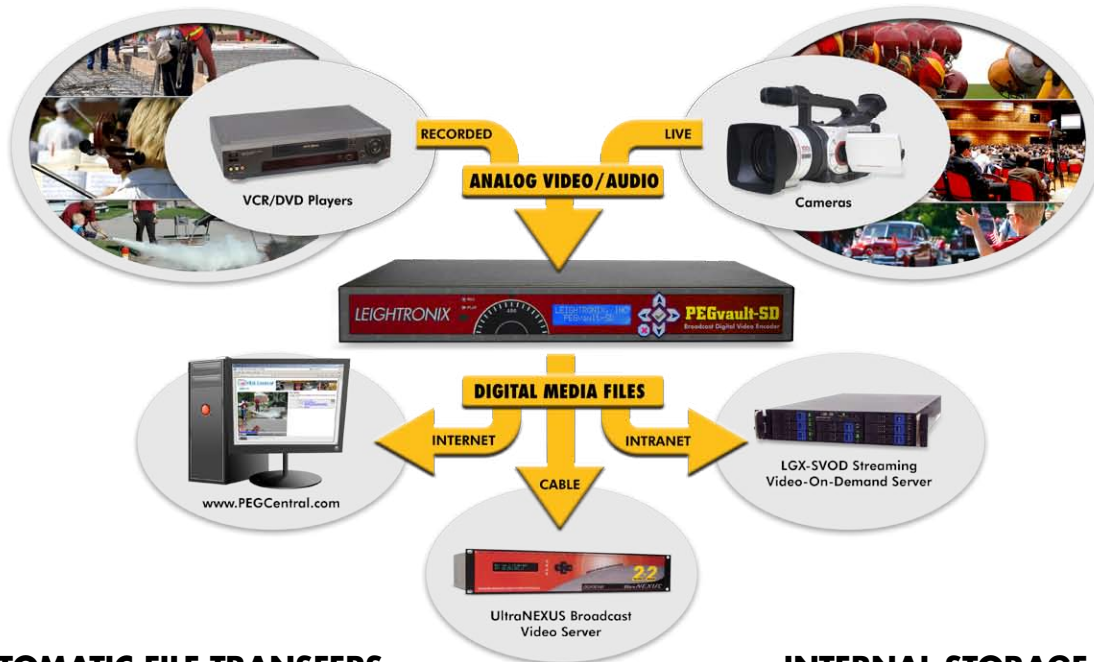

## Features

- Easy Setup via Web Interface
- Hardware Media Encoder Produces Top-Quality Results
- Extended Program Length Recording (up to 23 Hours, 59 Minutes)
- Record Presets Simplify Operation
- Encodes for Broadcast or Web
- Wireless Remote Control Included
- Automatic File Transfer to Broadcast or Streaming Video-On-Demand Server
- Rack Mount or Tabletop Configuration
- 100% ACM Server Standards Work Group Specification Compliant

Affordable ♦ Versatile ♦ Reliable  
Cable and Broadcast Solutions

**LEIGHTRONIX, INC.**  
Video Servers • Television Automation

Quickly and easily encode from a variety of analog video resources. When you are done encoding, PEGvault automatically transfers digital media files to a pre-assigned, video server of your choice.

### AUTOMATIC FILE TRANSFERS

With the PEGvault's network connection capabilities, you can automatically transfer your newly recorded digital media files to your own broadcast video or streaming video-on-demand server. PEGvault digital media files can also be sent to your own streaming video-on-demand portal at [www.pegcentral.com](http://www.pegcentral.com), the Web hosting and streaming video-on-demand service from LEIGHTRONIX.

Install your PEGvault anywhere you need it and automatically transfer the digital files to your playback site's location. Even deploy multiple PEGvaults and transfer files to the same or multiple playback or media hosting destinations.

### FILE COMPATIBILITY

The PEGvault produces industry-standard, widely compatible MPEG-2 digital media files. Files created on the PEGvault are compatible with the Alliance for Community Media server standards and will play on popular video servers, including the LEIGHTRONIX NEXUS®, UltraNEXUS™, MINI-T-NX™, and TCD/NX™.

### INTERNAL STORAGE

Unlike the DVD recorders many have chosen for capturing events in remote locations, the PEGvault has the storage capacity for high-quality, extended length, MPEG-2 media files. The PEGvault's internal, 120 gigabyte hard drive provides more than enough capacity for storing files before they are transferred to the selected destination. This means you do not have to lower recording quality just because the meeting ran too long!

### EASY NETWORK SETUP

The PEGvault's front panel display and keypad provide easy setup for TCD/IP network connection. Use the keypad to quickly enter an IP address, subnet, and gateway.

### TABLETOP OR RACK MOUNT DESIGN

Compact enough for tabletop use, it's just as easy to install the PEGvault with the provided rack mount kit.
